

# JB 2000 QUIET

## Acoustic full partition

A complete wall system from Beddeleem that stands for excellent acoustic performance (highest sound insulation, up to 64 dB). The system has, among other things, its own window frame and door sections.

## Same look as JB 2000

Thanks to its decoupled arrangement, this wall combines the looks of the JB 2000 wall system with better acoustic performance.

## Ideal for confidential calls

The JB 2000 QUIET system wall lends itself perfectly as a partition between 2 desks or for meeting rooms. This is because transmission noise is not only perceived as disturbing, but in some cases it can also be completely undesirable (confidential conversations).
